UFO Data Enrichment & ETL

Advanced Analytics on Unidentified Anomalous Phenomena (UAP ex UFO)

We are not alone!

In the analyzed period, **88,000 UFO sightings** have been recorded across the world.
While the odds of a close encounter remain low, the data reveals clear patterns of activity. According to our records, the highest probability of spotting something in the sky occurs on:
Month: July
Weekday: Wednesday
Hour: 9:00 PM (21:00 hs)
The **median duration** of a UFO observation is **180 seconds (3 minutes)**, which is more than enough time to get your camera ready and capture the evidence!
Watch the sky and don't miss a moment!
